It has been brought to my attention that Aetna has recently been denial pain management procedures (even after giving authorization confirmation (example pt GG), requesting unreasonable amount of records, holding reviews of standard services for 90 days or more, falsely labeling standard procedures like SIJ injection (approved more than 30 years ago) and other as "experimental". These are unethical policies aimed at denial of legitimate life saving services and putting patients health and life at risk to achieve unethical financial objectives. Please stop and desist.
